RECORD 1984/13

DATA FILE AUSTCO : WELLS DRILLED
FOR PETROLEUM IN AUSTRALIA
(TO JANUARY 1984)

Compiled by
D.J. Forman, A.L. Hinde, & J. Totterdell

ABSTRACT

Data from about 3200 petroleum exploration and development wells drilled in Australia from the early 1900s are made available in this report. The wells are located by latitude and longitude, State or Territory, basin, sub-basin or infrabasin, and by position onshore or offshore. Other information provided includes operator, classification, total depth, date well reached total depth, and whether oil, gas, or oil and gas were discovered.

These preliminary data are published because they are needed by private companies and government and because they are background information to research results that are in preparation. The sources of the data are also listed.

INTRODUCTION

AUSTCO is a computer-based data storage and retrieval system that contains the well data needed for a study of wells and well depths drilled in Australia and for calculation of success rates. Data items are well name and number; latitude and longitude; State or Territory; onshore or offshore; basin; sub-basin or infrabasin; operator; classification; total depth; date well reached total depth; and whether oil, gas, or oil and gas were discovered. Together with data on the size of the oil and gas fields discovered, contained in a confidential section of the file, it can be used to graph discovery rates, to prepare graphs of cumulative field size plotted against number of discoveries, and to prepare estimates of undiscovered petroleum resources by the methods outlined by Meisner & Demirmen (1981) and Forman & Hinde (in prep.).

The data are regarded as preliminary, pending completion at BMR of PEDIN, a comprehensive computerised well data system. The AUSTCO printout is published because of a need by private companies for this type of data and as background information to research results that are being prepared for publication (Forman & Hinde, in prep.). Instructions for using the data base are contained in Hinde (1984 a,b).

DATA INCLUDED IN THE FILE

The data from about 3200 wells are included in the listings. They include most of the recorded wells drilled from the early 1900s to January 1984 as part of the search for conventional petroleum deposits by private enterprise. Some wells, terminated for engineering reasons without reaching sufficient depth to test the objective sedimentary sequence, have been omitted from the data, as have a few petroleum exploration wells that were too poorly recorded or too shallow in depth to be usefully included in the system. Water and coal bores, oil-shale wells, wells drilled to evaluate gas in coal seams, and wells drilled by government departments and statutory authorities have also been excluded.

SOURCES OF DATA

Compilation was assisted by computer processing of magnetic tapes of some Queensland data supplied by the Queensland Department of Mines, some Australian data supplied by Shell Development (Australia) Pty Ltd, and data from oil and gas producing areas compiled by DJF and ALH. Part of these data were altered to conform with the many sources of information listed below and BMR's card filing systems, and additional data were added as necessary.

LOCATION OF WELLS

Latitude and longitude are given to the nearest second. Location by State or Territory is indicated by initials, and position onshore or offshore is indicated by the initials N or F, respectively.

Each well is recorded in AUSTCO once only, even though the well may have penetrated the sedimentary rocks of several basins. The name of the main sedimentary basin penetrated by each well is shown and, in some cases, the name of an infrabasin or of a sub-basin is also shown, usually indicated by an abbreviation (see listing below).

ASHMORE	Ashmore Block (Bonaparte Basin)
BARBWire	Barbwire Terrace (Canning Basin)
BARROW	Barrow and Dampier Sub-basins (Carnarvon Basin)
BEAGLE	Beagle Sub-basin (Carnarvon Basin)
BEDDOUT	Bedout Sub-basin (Canning Basin)
BROOME	Broome Arch (Canning Basin)
CENTRAL	North of 26 degrees south (Bowen Basin)
CENTRAL	Central Deep (Gippsland Basin)
DARWIN	Darwin Shelf (Bonaparte Basin)
EXMOUTH	Exmouth Plateau (Carnarvon Basin)
FITZROY	Fitzroy Trough (Canning Basin)
JURGURRA	Jurgurra Terrace (Canning Basin)
KIDSON	Kidson Sub-basin (Canning Basin)
KIMBERLEY	Kimberley Shelf (Bonaparte Basin)
LENNARD S	Lennard Shelf (Canning Basin)
LONDON	Londonderry High (Bonaparte Basin)
MALITA	Malita Graben (Bonaparte Basin)
MARGARET	Margaret Terrace (Canning Basin)
PEEDA	Peedamullah Shelf (Carnarvon Basin)
PETREL	Petrel Sub-basin (Bonaparte Basin)
PORT CA	Port Campbell Embayment (Otway Basin)
RANKIN PL	Rankin Platform (Carnarvon Basin)
ROWLEY	Rowley Sub-basin (Canning Basin)
SAHUL	Sahul Platform (Bonaparte Basin)
SOUTHERN	South of 26 degrees south (Bowen Basin and overlying Surat Basin)
VULCAN	Vulcan Sub-basin (Bonaparte Basin)
WALLAL	Wallal Embayment (Canning Basin)
WILLARA	Willara Sub-basin (Canning Basin)

COMPANY NAMES AND ABBREVIATIONS

The name of the company that drilled the well is included as an abbreviation. Because of historical changes in company names or ownership, an abbreviation may refer to a number of companies.

ABOC	American Oil Company
ABOIL	Abrolhos Oil N.L., Abrolhos Oil & Investments Ltd
ACS	Australia-Cities Services Ltd
AEQ	Ampol Exploration (Queensland) Pty Ltd
AIS	Australian Iron and Steel Ltd

CLASSIFICATION OF WELLS

Petroleum wells are classified as new-field wildcat (NFW), extension (EXT), shallow pool test (SPT), deeper pool test (DPT), new pool wildcat (NPW), development (DEV), stratigraphic (STR), or service (SRV) according to the system originally established by Lahee and described by Johnston (1976). Wells have been classified this way in The Petroleum Newsletter since publication began in 1969, except that stratigraphic wells were included as new-field wildcats. An attempt has been made here to separate out the stratigraphic wells. Wells terminated for engineering reasons without reaching their objectives are unclassified.

The wells drilled from 1960 to 1969 have been given a tentative classification. Unless other information was available, it was generally assumed that three extension wells were drilled on each onshore field before development drilling commenced. All drilling from offshore platforms has been classified as either development or service.

The various well classifications become increasingly difficult to determine before about 1960, when reporting standards were generally lower. Many of these wells remain unclassified.

ACKNOWLEDGEMENTS

E. Nicholas, J.M. Henry, G.C. Mortimer, N.F. Carugno, and W. Hessler gave valuable assistance in locating the data. Speed of compilation was considerably enhanced by computer processing of magnetic tapes kindly supplied by Shell Development (Australia) Pty Ltd and the Geological Survey of Queensland.
