Mineral deposits of the Georgetown Region -----	1
References -----	57

Explanatory Notes

The data presented here complement a 1:250 000 - scale map: 'Mineral deposits of the Georgetown Region' by J.H.C. Bain & I.W. Withnall - which is a companion to 'Geology of the Georgetown Region', a 1:250 000 - scale geological map by J.H.C. Bain, I.W. Withnall, B.S. Oversby and D.E. Mackenzie (the map reference in the first column of the table refers specifically to the mineral deposits map). Geological Survey of Queensland (GSQ) Publications 91,100, & 370 by I.W. Withnall give detailed information on many of the deposits.

Production figures: These have been compiled mainly from Warden's reports in the Annual Reports of the Queensland Department of Mines (ARDM); others were compiled from Geological Survey of Queensland publications and personal communications.

References: The numbers listed alongside the Published & Unpublished subheadings under Comments & References in the table correspond with numbers in the list of references. The numbers listed alongside the ARDM subheading refer to the years of the annual report.

In some cases, two or more reports by an author (or authors) on a particular deposit are shown as a single reference number in the table, but are listed separately in the references (eg. Reference 44 in the table equals references 44A (Osbourne, 1978) and 44B (Osbourne, 1979) in the reference list).

(ii)

Unpublished references include:

1. BMR & GSQ Records
2. Company reports (mainly in Queensland Department of Mines Library as of June 1984).
3. University theses
4. Other (e.g. old GSQ files).

Company reports on (CR) open file with the Queensland Department of Mines are accompanied by the relevant CR number, whereas those still confidential and therefore unavailable are unnumbered. Many (or most) of the latter will eventually become available on open file. Final reports that comprehensively review all the work and data given in earlier reports on a tenement are listed in place of the other reports.

Listed ARDM references contain descriptions of workings etc in the Wardens Reports; production data alone are not referenced. In some cases blocks of consecutive years have been shortened to fit the computer file (eg 1901-09, 1911-14, 1917-25 become 1901-25).
