## INTRODUCTION

This bibliography lists reports arising from Australian work in Antarctica and the sub-Antarctic islands in the fields of general geology, geomorphology, glacial geology, and marine geology. It does not include reports by workers normally resident in Australia who worked in Antarctica as full members of another nation's expedition, or whose project was supported financially by another nation. On the other hand, it does include reports by workers from Australian organizations who were given some support by another nation, e.g. space on an oceanographic vessel, but whose work was not guided by or under the auspices of that nation.

The list includes those published and unpublished reports issued or in press by the end of May 1970. The unpublished reports generally had only a limited distribution when they were issued; most have since been published either in full or as reports integrating the essence of two or more unpublished reports.
