REPORT ON SAMPLES FROM A CUTTING  
APPROXIMATELY 40 MILES NORTH OF INJUNE  
ALONG ROLLESTON HIGHWAY, QUEENSLAND

by

I. CRESPIN

REPORT ON SAMPLES FROM A CUTTING  
APPROXIMATELY 40 MILES NORTH OF  
INJUNE ALONG ROLLISTON HIGHWAY,  
QUEENSLAND.

c2

Report No. 1948/74  
(Pal. Ser. No. 30)

The samples are listed in descending order.

1. Fawnish, micaceous, carbonaceous shale and sandy shale.
2. Dark grey to fawnish mudstone with indeterminate plant remains.
3. Dark grey to fawnish mudstone with indeterminate plant remains.
4. Grey carbonaceous mudstone and sandy shale.
5. Similar to Sample 4.
6. Indeterminate plant remains.

It is impossible to give an age to the above samples owing to the poor preservation of the plant remains. It is suggested that a further search at this locality should produce specimens which could be determined.
