MICROPALAEONTOLOGICAL EXAMINATION OF SAMPLES FROM
BORE NO. 3719 ON THE PROPERTY OF J. W. FISHER AND SON, WALLANGAM-
BONE, NORTHERN NEW SOUTH WALES.

Report No. 1945/35.

The series of samples examined from Bore No. 3719 are from the depth of 1564 feet down to 2015 feet. The samples consist of friable sandstones, which contain no palaeontological evidence to indicate the age of the beds. Unfortunately, no samples are available above 1564 feet.
