

# Index Of Airborne Geophysical Surveys (Fifth Edition)

The Fifth Edition of the Index of Australian (AGSO/BMR and State) Government airborne geophysical surveys is being released in both hardcopy and digital format. This edition of the Index contains a more comprehensive coverage of surveys than the previous version of 2000. Information on older surveys prior to 2000 has been updated and additional surveys have been included from various State and Federal exploration initiatives and the ongoing regional work of Government bodies. Specifications of several open file surveys are also included in this release.

The hardcopy version (published as an AGSO record) contains a summary of the major specifications of over 850 Airborne surveys.

The digital version consists of AEROMAP, a Windows program (NT compatible) which allows the user to selectively access a database of information for each survey. This is achieved by interactively querying a map of Australia upon which the polygonal boundaries of individual surveys are plotted. Aeromap was developed under contract, and requires no software other than a Windows operating system installed on a PC. It is supplied on a single 3.5 inch high-density floppy disk.

Updated data files of the Index of Airborne Geophysical Surveys in AEROMAP, ESRI Shape and MapInfo TAB formats showing the coverage over Australia of AGSO and State Government airborne magnetic and radiometric surveys have been updated (to 20 April 2001) and are also available.

The Aeromap CD contains one copy of the AEROMAP software and associated digital information. The digital data CD contains one copy of each data file in Aeromap, ESRI Shape and MapInfo TAB formats.

An preliminary on-line version of the index can be viewed at <http://www.agso.gov.au/map/>

---	--

## Aeromap Capabilities

- displays airborne geophysical surveys on a map of Australia
- display information about a selected survey - brief or detailed
- choose which type of survey to display (e.g. regional or NGMA)
- uses 1:1 000 000, 1:250 000 or 1:100 000 map sheet names for reference (depending upon zoom level)
- current cursor position is displayed as longitude and latitude
- zoom and pan around map
- copy any part of the PC screen to the clipboard
- print the current view of the map
- write information about selected surveys to a log file
- view, edit and/or print the log file
- view aeromap.txt as a spreadsheet
- hints from the status bar
- online help
